What CRC is the 3rd most common cancer in the US.

Why CRC is the most preventable, yet least prevented cancer.

How Screening is very effective and new options are less invasive.

When Screening starts as early as 45 for most, and earlier if there is a family history.

Signs and Symptoms of Colorectal Cancer

Signs of CRC may be very similar to other health problems:

- Changes in bowel habits like diarrhea, constipation, skinny stool.
- Stomach pain and gas.
- Blood in stool.
- Fatigue, unexplained weight loss.

Genetics in Colorectal Cancer

- All cancer is genetic, it is always caused by changes to DNA.
- The DNA changes in the cancer itself can help guide treatment decisions.
- If someone is diagnosed with colorectal cancer, it is important that all DNA changes are tested to avoid harmful treatments.
- Some CRC is inherited, meaning DNA changes are passed through families.
- Ask about your family history and talk to your doctor about risk for inherited colorectal cancer.

What can you do?

Be Proactive
Pay attention and be proactive about your health

Screen
If you are of age, get all the screening your doctor recommends

Test
If you have cancer diagnosed, ask if all genetic biomarkers have been tested

SUGGESTED DOCTOR VISIT CHECKLIST FOR CANCER SCREENING OR DIAGNOSIS

- Know your insurance carrier and what plan you have
- Bring a list of current medications
- Identify any symptoms you want to discuss
- Make a list of things you want to discuss and questions you have
- Prepare your family history of cancer: who is affected, what cancer was it, when did they get cancer
- Communicate symptoms and family history clearly
- Explore screening options
- Take notes of the plan and recommendations
- If any testing is recommended, ask about options and completeness
- Before testing is done, verify if insurance will cover it and under what circumstances
- Confirm and clarify the plan at the end of the visit
- Confirm when the next visit should happen
- Confirm what number to call to check test results and when they are expected
- Identify support resources for you and your family

Questions to consider asking your doctor

- What can I do to lower my risk of cancer?
- Should I see a genetic counselor?
- So, you have done a biopsy. Is this sample going to be tested for genetic changes?
- Am I a candidate for liquid biopsy?
- Before we start treatment, have all the genetic markers been tested?
- What are the side effects of this treatment?
- Are there any reasons I shouldn’t receive this particular treatment?
- What can I do now to put a plan in place if I am diagnosed with cancer?
